New Year Quick Tips

FILE EXTENSIONS/FILE SYNCRONIZATION

There are a variety of types of files that can be opened simultaneously in **Soloist**®. If you place files with the same name, but of different types in the **same folder**, when you open the audio/video file the other files will also open. An example of this would be an audio file, bookmark file, and a text file. Another example would be of a .wav file, .html file, and a .jpeg image file.
